Component: **Session Manager**

Module Name: **Session Manager**

Inputs	Process	Outputs
UserInputs	Manages and remembers the user's preferences, login information, and previous session data.	*UserInputs*
DatabaseQueryResults		*PrevSessionData*
		DatabaseQuery
		CurrSessionData

Inputs:
- *UserInputs* - User inputs and commands from the application client.
- *DatabaseQueryResults* - Database query results.

Process Description:
      This process is responsible for saving the preferences (ex. language) for future application sessions, user login information, and storing the results from previously run commands.

Outputs:
- *UserInputs* - User inputs and commands from the application client.
- *PrevSessionData* - Preferences and the results of previously run commands saved to this application installation.
- *DatabaseQuery* - Database query created by user inputs.
- *CurrSessionData* - Data gathered from the current application session.
